Notes:

Tetragon Financial Group Limited is referred to in this Monthly Factsheet as Tetragon.

- NAV Per Share Total Return (NAV Total Return) month to date and year to date as of the date of this Monthly Factsheet; annualised to the date of this Monthly Factsheet over the last five years, the last ten years, and since Tetragon's initial public offering in April 2007. NAV Total Return is determined in accordance with the "NAV total return performance" calculation as set forth on the Association of Investment Companies (AIC) website. Tetragon's NAV Total Return is determined for any period by calculating, as a percentage return on the Fully Diluted NAV Per Share (NAV Per Share) at the start of such period, (i) the change in NAV Per Share over such period, plus (ii) the aggregate amount of any dividends per share paid during such period, with any dividend deemed reinvested at the NAV Per Share at the month end date closest to the applicable ex-dividend date (i.e., so that the amount of any dividend is increased or decreased by the same percentage increase or decrease in NAV Per Share from such ex-dividend date through to the end of the applicable period). NAV Per Share is calculated as Net Assets divided by Fully Diluted Shares Outstanding. Source: Tetragon.
- Tetragon seeks to deliver 10-15% Return on Equity (RoE) per annum to shareholders. Tetragon's returns will most likely fluctuate with LIBOR. LIBOR directly flows through some of Tetragon's investments and, as it can be seen as the risk-free short-term rate, it should affect all of Tetragon's investments. In high-LIBOR environments, Tetragon should achieve higher sustainable returns; in low-LIBOR environments, Tetragon should achieve lower sustainable returns. The "Annual Average Since IPO" figure includes the current year.
- The dividend yield represents the rolling 12 months of historic dividends divided by the TFG NA share price at the date of this Monthly Factsheet. Dividend cover is Earnings Per Share divided by Dividends Per Share at 31 March 2019. The 5-year Compound Annual Growth Rate (CAGR) figure is at 31 March 2019.
- With the exception of share repurchases (when applicable), all of the Fully Diluted NAV Per Share movements in the table are determined by reference to the fully diluted share count at the start of the period. Other share dilution/accretion captures the impact of, where applicable, and among other things: scrip dividends; additional recognition of equity-based compensation shares; and changes in dilution due to share options.
- Any gains or losses on foreign exchange hedging instruments attributable to a particular strategy or sub-asset class have been included in "Additions" or "Disposals/Receipts", respectively. For example, where a hedging gain or loss is made, this will result in either cash being received or paid, or cash being receivable or payable, which is equivalent to a receipt or disposal.
- Label numbers have been rounded. (i) NAV Per Share Total Return as of the date of this Monthly Factsheet since Tetragon's initial public offering in April 2007. See Note 1 for further information. (ii) Total shareholder return to the date of this Monthly Factsheet, defined as share price appreciation including dividends reinvested since Tetragon's initial public offering in April 2007; sourced from Bloomberg. (iii) Any indices and other financial benchmarks are provided for illustrative purposes only. Comparisons to indices have limitations because, for example, indices have volatility and other material characteristics that may differ from the fund. Any index information contained herein is included to show general trends in the markets in the periods indicated, is not meant to imply that these indices are the only relevant indices, and is not intended to imply that the portfolio or investment was similar to any particular index either in composition or element of risk. The indices shown here have not been selected to represent an appropriate benchmark to compare an investor's performance, but rather is disclosed to allow for comparison of the investor's performance to that of certain well-known and widely-recognised indices. The volatility of the indices may be materially different from the individual performance attained by a specific investor. In addition, the fund's holdings may differ significantly from the securities that comprise the indices. The MSCI ACWI captures large and mid-cap representation across 23 Developed Markets and 24 Emerging Markets countries. With 2,700 constituents, the index covers approximately
